EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark Haynes on 4-19-05.

The application has been amended as follows:

Claim 1, line 1, delete the phrase "thin film".

Claim 1, line 2, delete the phrase "of the type".

Claim 1, line 2, delete the word "thin".

Claim 1, line 7, delete both occurrences of the word "thin".

Claim 1, line 11, delete the word "thin".

Claim 5, line 2 delete the word "thin".

Claim 5, line 3, delete the word "thin".

Claim 6, line 1, delete the word "thin".

Claim 35, line 1, delete the word "thin".

Claim 35, line 2, delete the word "thin".

The following is an examiner's statement of reasons for allowance:

Claims 1-8, 10, 13, 14, 34 and 35 are allowable over the prior art of record because the prior art of record does not teach the claimed subject matter including the steps of providing a metal substrate having a cold worked surface, characterized by

Application/Control Number: 09/894,375

Page 3

Art Unit: 1753

microstructural mechanical variations at and below the surface resulting from smoothing processes and with an average surface roughness of less than about 30 Angstroms, and vacuum-sputter deposition of a metallic layer onto the surface of the substrate, said metallic layer selected to bind to the substrate, thereby masking said microstructural mechanical variations of the substrate, and to reactively or catalytically nucleate the electroless plating of said nickel alloy in a subsequent wet chemistry step, depositing a nickel alloy layer by electroless plating on said thin metallic layer, the nickel alloy layer having surface roughness essentially unchanged from that of the cold worked surface of the metal substrate upon completion of the electroless plating.

The closest prior art to Nanis (U.S. Pat. 5,405,646) do not recognize the masking utilizing a vacuum-sputter deposited metallic layer of the microstructural mechanical variations at and below the surface resulting from smoothing process and with an average surface roughness of less than about 30 Angstroms. Suenaga et al. (U.S. Pat. 5,478,657) while recognizing smoothing of the substrate teaches away from providing a metallic layer directly on the smoothed substrate for masking but instead applies the nickel alloy directly on the smoothed substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
